

ITx for Backup

With ITx for Backup, your data is automatically backed up daily to a secure offsite location and recoverable instantly to any place you need it.

What will happen to your company if you lose your valuable data? How will it affect revenue? Employee productivity? Customers?

- Do you back-up your data daily?
- Is your data stored offsite?
- Do you have business continuity plans in case of disasters?
- Do you comply with SEC Rule 17a-4, 21CFR Part 11, HIPAA, Sarbanes-Oxley, DoD 5015.2, or any number of other rulings that require secure offsite data storage?

If you answered “no” to any of these questions, ITx for Backup is for you.

Protect your data — 100% guaranteed

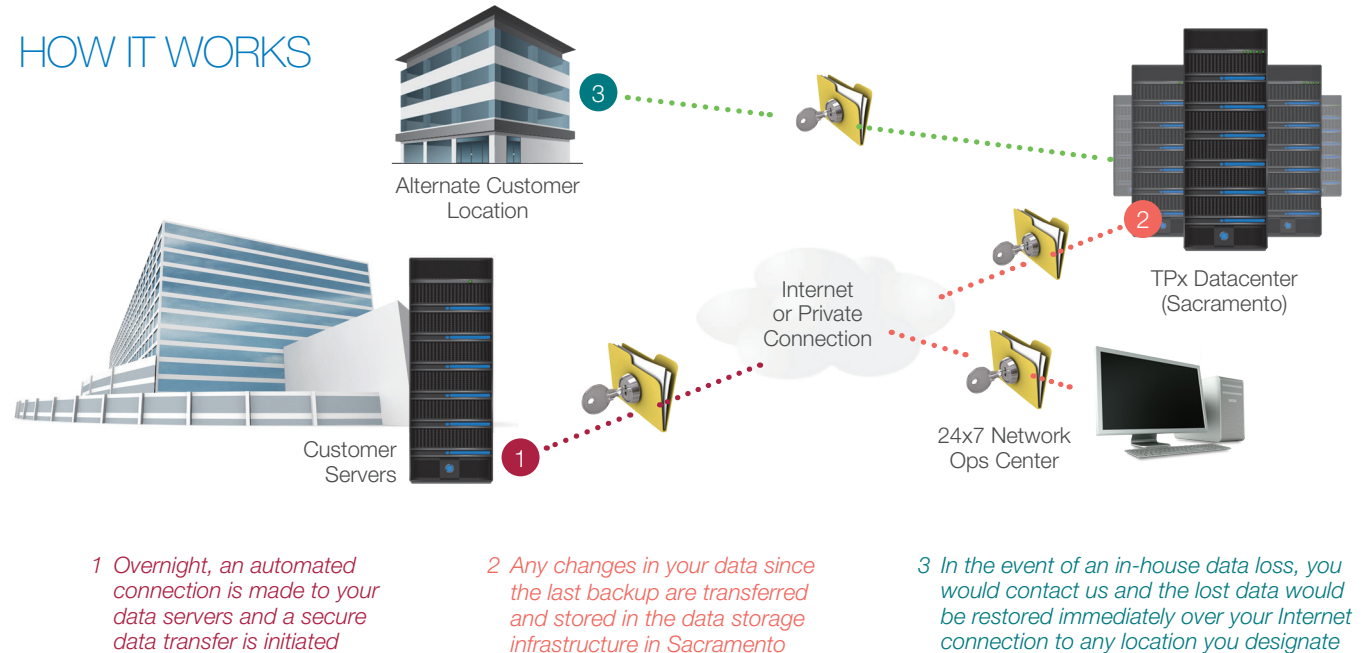

Events like disk crashes, server corruption, viruses and natural and human disasters can take your business permanently offline. Protect your data and have peace-of-mind knowing that your business can be functioning in minimal time in the event of data loss. All you need is an Internet connection.

ITx for Backup is a complete data backup and recovery service that automatically and securely backs up your critical information over your existing Internet connection to secure infrastructure in Sacramento. You can rest assured that your valuable information is backed up — 100% guaranteed.

KEY BENEFITS

- 24 x 7 monitoring and management of systems and backups
- Data protection performed on enterprise-class infrastructure
- Completely automated
- Reduced capital costs
- No software or media charges
- Your data will never leave our IP network
- Add VPN services to achieve greater performance, privacy and security

HOW IT WORKS

Automated backup via your Internet connection

Restore individual files, email boxes, and full databases. ITx for Backup supports standard files, databases and MS Exchange to name a few. Every night your data is automatically transferred to a secure offsite storage location via your Internet connection. Each morning you can view the status of your backup jobs through our web portal.

Data Security: ITx for Backup uses leading storage technology to assure security at multiple levels including network security, server security, data and operational security. Using VPN, firewalls, and intrusion detection, your data is safe in transit and is stored at a secure offsite data center.

Aggressive SLAs: We successfully start 97% of all scheduled backup jobs within one hour of the scheduled start time and guarantee 100% restore success.

Advanced Storage Technology: ITx for Backup uses the most advanced back-up technology to enable customers to back up more than 80 gigabytes of data over a single T1.

14-Day Standard Retention: ITx for Backup retains your critical data for up to two weeks. Custom retention policies and off-site vaulting are available for longer term storage requirements.
