

TPX COMPLETE

Essential services in
a superior bundle

The TPx Complete bundle comprises a full range of essential managed services — right-sized so it doesn't include anything you don't really need. You can always add-on users and services later. And, we make everything work together perfectly.

UCx Hosted Unified Communications Service

- Built on the high-quality VoIP service that TPx is known for
- Call, chat, video conference, and start interactive online meetings from anywhere
- Includes Polycom IP phone for every user

Virtual Fax

- Enterprise-grade faxing in the cloud, inbound and outbound
- Ideal for secure document transfers and remote working

MSx Managed SD-WAN

- Ensures enterprise-grade quality and continuity
- We monitor and manage broadband connections from any provider, delivering real-time visibility into network and application performance, including UCx

Managed 4G LTE Failover

- Provides Internet continuity if your connection is impaired
- Unlike dual-wired connections, which often share the same trench into a building, 4G LTE provides true path diversity

MSx Managed Firewalls

- Unified Threat Management consolidates firewall, anti-virus and web content filtering
- Experts from our Security Operations Center configure and monitor your firewall to provide real-time automated response to malicious activity based on threat intelligence

MSx Managed Endpoints

- Protects computers from viruses, malware, and other threats
- We proactively monitor and manage these devices, regularly providing application patching to ensure they're always current

Why choose
TPx Complete?

TPx Complete provides all of the voice, continuity, and cybersecurity services you need to run your business efficiently. You get a single point of contact, backed by 24/7/365 on-shore technical support, and it's all on one bill too. No other provider can do that!
