Top forces preventing organizations from advancing their cybersecurity efforts

SMBS face even more threats than enterprises, with fewer resources (tools, skills, and personnel). This is why more companies turn to MSPs to help them meet these challenges.

- Lack of resources
- Lack of expertise/understanding
- Lack of information
- Lack of time
- Lack of training

Must-haves under one umbrella

TPx’s layered approach to security

- Multi-factor authentication
- Mobile device management

FIREWALL SECURITY

- Application control
- Antivirus/anti-malware scanning
- Enhance network visibility
- Enhance Network control

ENDPOINT SECURITY

- 70% of breaches originate on the endpoint
- 80% of breaches are the result of poor patch management
- OS patching
- Third-party patching
- Next-gen AV software

Managed Services Providers can help by...

1. Investing in leading technologies so you don’t have to.
2. Delivering 24/7/365 monitoring/alerts so you are looked after at all times.
3. Proactively maintaining software systems to avoid problems.
4. Providing trained, certified resources to troubleshoot and resolve issues.
5. Managing to a specific service level, eliminating staffing constraints.
