

Patching: your greatest defense

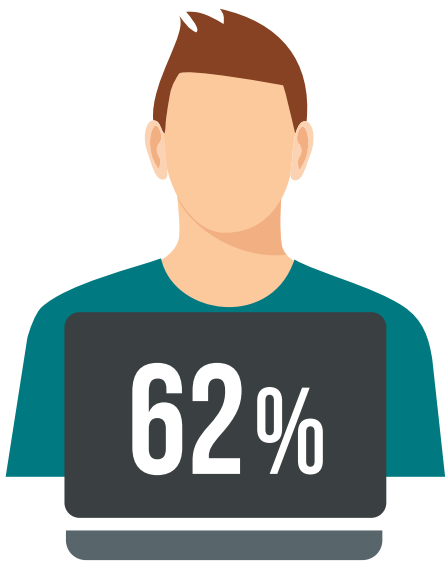

The situation is critical: 50% of all IT security vulnerabilities are the result of out-of-date application patches. Your business can't afford to ignore this risk.

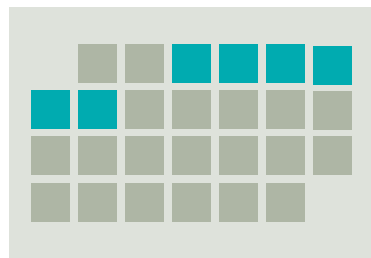

63% of security vulnerabilities discovered in 2016 could have been prevented with a strong patching policy

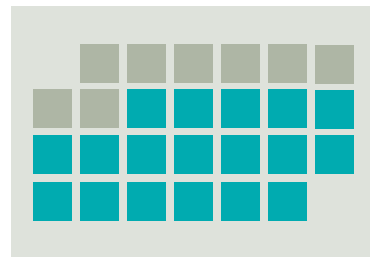

43% of cyber attacks target small business

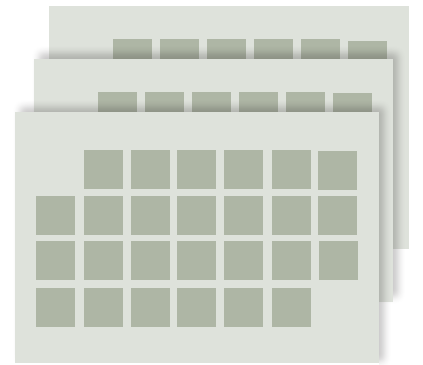

62% of businesses take more than 2 days to deploy critical patches

26%
2 TO 7 DAYS

22%
8 TO 30 DAYS

14%
1 TO 3 MONTHS

A surprising downward trend...from 2015 to 2016, fewer SMBs (29% v. 39%) used a patching strategy to prevent security breaches

The data shows that application patching is very important to IT security, but businesses are challenged to keep up with constant changes on a proactive basis.

Outsourcing this routine task to a managed IT service provider will keep your systems healthy and secure while freeing up your IT team's time to focus on other priorities.
