

# Become more cybersecurity for free with TPx

In 2021, 37% of all businesses and organizations were hit by ransomware.<sup>1</sup>

37%

## Free ransomware evaluation

Schedule a free 30-minute session with our security SME, during which he/she will walk you through a series of questions that will evaluate your ability to defend against and respond to a ransomware attack. The resulting report will present an evaluation of current readiness, along with customized recommendations on what aspects of your security footprint can be improved on.

\$1.85  
MILLION

Recovering from a ransomware attack cost businesses \$1.85 million on average in 2021.<sup>1</sup>

85% of data breaches were due to the "human element."<sup>2</sup>

85%

## Free cybersecurity hygiene "Townhall"

Get your staff educated on best cyber hygiene practices and common scams with our 30-minute virtual session led by our security expert.

84%

84% of U.S. organizations said security awareness training has reduced phishing failure rates.<sup>3</sup>

Phishing accounts for around 90% of data breaches.<sup>4</sup>

90%

## Free security awareness training (anti-phishing)

Want to see how our security awareness training works? Sign up for a free virtual phishing course.

86%

At least one person clicked a phishing link in around 86% of organizations.<sup>5</sup>

Cyber incidents are one of the top three business risks.<sup>6</sup>

3

## Free cyber threat assessment program

Get an in-depth view of the current state of your network. The Cyber Threat Assessment Program (CTAP) helps you identify your security risks and help you understand your network usage. At no cost to you, our team will monitor key indicators within your network. After gathering information, you will receive a Cyber Threat Assessment Report that will help you address important business concerns such as security, productivity, and/or utilization.

287

It takes an average of 287 days for security teams to identify and contain a data breach.<sup>7</sup>
