THINGS BUSINESSES NEED TO KNOW ABOUT
# Endpoint & Management Security

Endpoints – servers, workstations, phones, laptops or tablets – are the first point of entry for cyberattackers and weakest security links. Firewalls and antivirus aren't enough to keep your network secure. To fight today's cyberthreats, including endpoint management and security in your security program is a must.

1
Businesses Struggle to Identify Their Endpoints

Endpoint visibility is difficult for many organizations to achieve. A recent Cybersecurity Insiders report explains:

60% of organizations are aware of fewer than 75% percent of the devices on their networks.

58% identify every vulnerable asset in their organization within 24 hours of a critical exploit.

2

Endpoint Management = Visibility
Endpoint management enables visibility of devices on the network.

Endpoint Security = Protection
Endpoint security protects devices from cyberthreats.

Boost Visibility & Protection
Endpoint management and security are closely related but two different practices.

3
Business Benefits

Together, endpoint management and endpoint security offer increased control over endpoints and the following benefits:

Compliance
Ensure devices are compliant with industry regulations and standards.

Efficiency
Ensure devices are configured correctly and working optimally to improve employee productivity.

Security
Ensure devices are updated with the latest security patches.

4
Key Components

Endpoint management and security encompasses a variety of practices, procedures and services layered within a network, including:

- Patching
- Antivirus
- DNS Protection
- User Security
- MDR, XDR & EDR

5
Consider Outsourcing Endpoint Management & Security

In-house endpoint management and security are costly and challenging. As a result, most organizations outsource for both practical and strategic reasons.

- Budget
- Tools
- Talent
- Time

6
What to Look For

When choosing endpoint management and security service providers, look for:

- ✓ Breadth of service
- ✓ Regulatory compliance
- ✓ Service level
- ✓ 24/7 support
- ✓ Certifications

7
TPx is a Trusted Partner for Endpoint Management & Security

We arm you with leading remote monitoring and management tools and a team of industry-leading experts.

- Automated Monitoring, Alerting & Reporting
- Managed Detection & Response (MDR)
- Remote Endpoint Support
- Managed Next-Generation Antivirus (NGAV)
- Endpoint Patching
- Device Lifecycle Management
- Managed Inbox Detection & Response (IDR)
- DNS Protection
- Security Awareness Training

The bottom line is your organization's security is at stake, so it's crucial to choose an MSP with the scale, financial strength and technical resources to deliver reliable and responsive endpoint management and security.
