

TPx's Managed Firewalls with Fortinet Fortigate

Protect Any Network Edge at Any Scale

Fortinet's FortiGate Next-Generation Firewall (NGFW) provides full high-fidelity visibility into and across geographically distributed multi-cloud networks. It delivers consistent and coordinated end-to-end security protection for users, devices, applications, and data for ultra-scalable Security-Driven Networks. Combining leading Fortinet technology with TPx seasoned experts for more than 10 years, together we deliver truly integrated network and cybersecurity solutions.

Key Benefits

- Avoid breaches and business disruptions by preventing ransomware
- Reduce costs by eliminating point products
- Securely, seamlessly work from anywhere
- Meet escalating business needs with hyperscale security
- Simplify your workflows with 450+ partnerships
- Fortify your security posture
- Limit downtime due to network outages or crippling cyber attacks
- Meet your compliance challenges
- Free up resources to focus on business-driving initiatives
- Enhance productivity with safe, secure, high-performance communications
- Realize immediate value from your security investment

Our People Defending Your Business and Your People

TPx Managed Firewall service shields organizations and their employees with enterprise-grade security for a fraction of the cost of a single security analyst. The service includes certified security analysts who combine human intelligence with AI and threat intelligence driven data to find and terminate threats before they impact your business.

With Managed Firewalls powered by Fortinet technology, your business benefits from secure access, visibility and control, making your business more productive and secure.

Secure Access SD-WAN enables organizations to leverage multiple transport services (broadband internet, 5G, etc.) to connect users securely and economically to applications and each other, while a Virtual Private Network (VPN) connects remote workers.

Visibility With detailed reporting by TPx, know what is happening on your network — from the top apps running and the top sites being visited, to which users are on the VPN.

Control Once you know what is happening on your network, you can take action to control your network, so your productivity is maximized. Want to stop bandwidth and time-draining applications like video streaming? The choice and control are in your hands.

Solution features include:

- Managed detection & response
- Threat intelligence
- Sandboxing
- Vulnerability scans
- SD-WAN
- Anti-virus
- Web filtering
- Application control
- Intrusion prevention
- SSL deep packet inspection
- Web application firewall

Customer Success Story

"Having partners that we can rely on makes the job attainable."
