HOW A 'COMPLIANCE FIRST' MINDSET LIMITS LIABILITIES

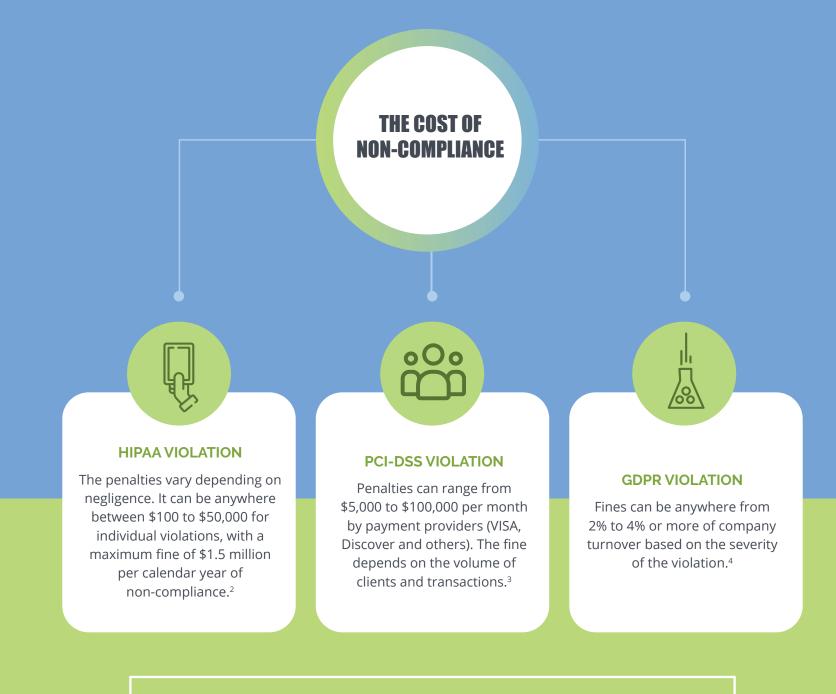

Are you trying to deploy the most affordable technology solution? Chances are it won't be compliant.

Using solutions that do not meet security, encryption and reporting measures outlined by regulations that you are trying to meet (HIPAA, PCI-DSS & GDPR) will make your business non-compliant and violate compliance insurance requirements.

Alarmingly, 40% of users worldwide don't have proper software licenses to meet compliance requirements for their industry.¹

Adopt the 'compliance first' approach for your business so that it meets minimum regulatory requirements to protect against fines and stay in compliance with liability insurance requirements.

If the insurance company invalidates your liability insurance claim because of something as simple as using a single non-compliant technology solution, the fines would pass to your business—instead of insurance covering them.

Contact us to know more about the 'compliance first' approach and to schedule your technology compliance assessment to detect compliance gaps. TPx.com
