# Managed Cybersecurity

## Enhance your cybersecurity effortlessly and affordably

Every business, no matter the size or industry, needs to consider the impact of a cybersecurity breach — and be ready for it. If your customers' data got stolen, what would you do? When it comes to cybersecurity, an ounce of prevention is worth a pound of cure. While there is no silver bullet, it pays to be prepared. You can either go it "alone" or work with a managed services provider, like TPx, to help you prepare. Managing it in-house can be more expensive and painful since cybersecurity talent is scarce.

Unlike many smaller MSPs, TPx boasts a comprehensive IT and cybersecurity suite. In our offerings, we combine cutting-edge technology from industry leaders like Fortinet, Kaseya, and GoSecure with deep-seated expertise. We offer security advisory services, assessments, ransomware protection, user and endpoint security, firewalls, backups, managed detection and response and more.  As a leading national provider serving thousands of customers, TPx has delivered expert IT and security solutions for over 25 years. We provide a range of service levels to meet your specific needs, whether you require minimal assistance or extensive support. Consider us an integral part of your team, available 24/7/365.

## TPx Security Solutions

| | |
|---|---|
| Cloud-to-Cloud Backup | One-click restore for Microsoft 365 (Exchange, OneDrive, SharePoint, Groups, & Teams) |
| Dark Web Monitoring | The detection and alerting of your company's sensitive data being shared on the hidden parts of the Internet, known as the Dark Web. |
| DNS Protection | Device security measures to safeguard devices that access the Internet by blocking known malicious threats. |
| Endpoint Management  & Security | Endpoint protection that includes patch management, next-gen antivirus, RMM, MDR and more |
| Firewall | Next-gen firewall with UTM (unified threat management), VPN, MDR |
| Hybrid Backup | On-premises Datto backup with replication to secure cloud |
| Inbox Detection & Response | Microsoft 365 plug-in to enable users to validate emails' authenticity with one click |
| Incident Response Plan | Creation of a plan that outlines how your organization would respond to and manage cybersecurity incidents |
| Network Security Assessment | An assessment of your organization's network security posture and profile |
| Penetration Scan | Scan that shows how exploiting a vulnerability could result in a significant impact on the environment |
| Ransomware Assessment | In-depth review of company's readiness in responding  to a ransomware attack |
| Security Awareness Training | Regular training courses with phishing simulations, following NIST guidelines |
| Virtual Compliance Officer (VCO) | Your security and compliance expert to assess and guide your compliance; Includes a Gap Assessment |
| Vulnerability Scan | A scan of devices connected to the network to identify vulnerabilities present due to open ports, missing patches, etc. |
| Wireless Security Assessment | An assessment  of your org's wireless infrastructure and configuration, security posture, and functional capabilities |

## No-Cost Starter Options

| Solution | Description |
| --- | --- |
| Dark Web Evaluation | Free one-time scan of the Dark Web to see if your company's sensitive data appear on the Dark Web |
| Network Security Evaluation (also known as CTAP) | Fast and free assessment to identify security risks and network usage |
| Ransomware Evaluation | Free 30-minute session with our security SME, with a high level output of areas in need of an attention |
| Security Awareness Townhall | Free 30-minute virtual session to educate staff on best cyber hygiene practices |

> "We get what we pay for and more with TPx's comprehensive cybersecurity expertise. We consider them a long-term partner."

## Combatting Common Myths

**Cybersecurity Is Essential for Businesses of ALL Sizes**

If you think your company is too small to be targeted, think again. Nearly half (43%) of all cyberattacks are against smaller organizations.

**Cybersecurity Is Not Just Technology**

Successful cybersecurity protection is a three-pronged approach that leverages people, processes and technology.

**Cybersecurity Is an Investment, Not a Cost**

75% of SMBs would not survive a ransomware attack.* Effective cybersecurity is a business investment because it supports continuous operations and boosts customer trust.

**Cybersecurity Is Affordable for SMBs**

Managed security (a.k.a. security-as-a-service) enables SMBs to source cybersecurity delivered by experts as an affordable monthly subscription.

**Cybersecurity Services Aren't Created Equally**

Choose a provider with both breadth and depth in security expertise and technologies to deliver the service levels you require.

## Why TPx?

Comprehensive portfolio of managed IT services

Solutions for cybersecurity, connectivity, and collaboration.

150+ certs across 60+ competencies: CompTIA, Cisco, SMC, Fortinet, Microsoft

HIPAA, PCI-DSS, and SOC 2 compliant solutions

Enterprise-class, anytime support

Tailored service levels and highly-customizable solutions

National footprint, with multi-site, multi-carrier, partner coverage

25 years of helping customers with IT

Dedicated teams to ensure service excellence

Ongoing investment in automation, self-service innovation, and back-office
