

Cybersecurity Readiness Evaluation

Evaluate vulnerabilities, reduce risks, and strengthen your business' defenses

TPX

Security Threats Continuously Evolve — Are You Prepared?

Cybersecurity has become the number one business risk in the world. According to the U.S. Department of Justice, cyberattacks continue to rise at an alarming rate, targeting businesses of all sizes. Cybercriminals have turned hacking and malware into a thriving, money-driven industry, with commercial-grade exploit kits readily available to those seeking to exploit vulnerabilities. A reactive approach to security is no longer enough. With new threats emerging every minute, businesses must take proactive steps to protect themselves against costly security breaches.

Cybersecurity risks are particularly concerning for small and medium businesses, many of whom lack the resources to defend against sophisticated attacks. With a Cybersecurity Evaluation, you can quickly understand your exposure to cyber threats—and how to protect your business.

How It Works

A cybersecurity expert from TPx will walk you through a series of questions designed to evaluate your ability to prevent, detect, and respond to cyber threats. By focusing on key attack vectors—including phishing, remote access vulnerabilities, and web-based threats—we are able to quickly identify weaknesses and provide you with actionable intelligence.

Take Advantage of our Complimentary Evaluation

This complimentary 30-minute cybersecurity evaluation will help you learn:

- Whether your business is properly protected against malicious web content
- If your network visibility is sufficient to detect and respond to threats
- If your employees are trained to recognize and avoid security risks in email and other common attack vectors
- If your backup strategy will enable your organization to recover quickly and minimize downtime in the event of a breach

The resulting report will present an evaluation of your current security readiness, along with customized recommendations on how to improve your security footprint and enhance your resilience against cyberattacks.

By partnering with TPx's cybersecurity experts, your organization can gain deep insights into where you have the most exposure, as well as the mitigation techniques needed to strengthen your security posture.

*Free evaluation is limited to one per customer.
