

Cybersecurity Advisory Services

Comprehensive cybersecurity consulting services

The Cyber Battlefield: Are You Ready?

Cyber threats aren't just evolving—they're outpacing businesses at an alarming speed. **Ransomware is more relentless, phishing scams are more deceptive, and compliance requirements are more complex than ever.** The challenge? Most businesses don't have the time, resources, or in-house security teams to keep up. **That's where TPx comes in.**

Why Choose TPx?

At TPx, we don't just identify security gaps—we help businesses build real, sustainable cyber resilience through expert-driven risk assessments, hands-on compliance guidance, and custom advisory services tailored to your needs.

Fewer Security Gaps

More confidence in your defense.

No Compliance Headaches

Just clear, audit-ready strategies.

No In-House Security Team?

No problem. We bring the experts to you.

This isn't just about avoiding cyberattacks - it's about owning your security and staying ahead of threats. With Tpx, businesses gain the knowledge, tools, and strategies to proactively mitigate cyber risks, optimize security investments, and align with industry best practices.

Cybersecurity Advisory Services at a Glance

Service	What It Does	Key Benefits
Cybersecurity Compliance Management	Helps businesses meet PCI-DSS, HIPAA, NIST, and other regulations	Avoid penalties, simplify audits, and bolster compliance
Compliance Gap Assessment	Evaluates your organization's security posture against standards like HIPAA, PCI-DSS, and FTC Safeguards	Identify vulnerabilities, reduce risks, and get a prioritized roadmap for compliance and security maturity
Network Vulnerability & Penetration Scanning	Identifies security gaps and simulates real-world attacks	Proactively eliminate vulnerabilities before hackers exploit them
Dark Web Monitoring	Scans for stolen credentials and leaked business data	Get instant alerts and protect accounts before it's too late
Network Security Assessments	Analyzes and secures network architecture	Improve network visibility and harden defenses
Wireless Security Assessment	Identifies Wi-Fi security gaps and misconfigurations	Prevent unauthorized access and data interception
Microsoft 365 Security Assessment	Evaluates M365 security settings, compliance, and authentication	Optimize cloud security and prevent breaches
ASV Scan - PCI-DSS Compliance	Certified external vulnerability scanning for PCI compliance	Protect cardholder data and maintain compliance
Customized Advisory Services	Tailored security consulting	Gain on-demand security expertise without full-time costs

Cybersecurity Compliance Management (CCM)

Compliance without the confusion. Failing to meet PCI-DSS, HIPAA, or NIST standards can lead to fines, security breaches, and reputational damage. But compliance shouldn't be a burden—it should be an opportunity to strengthen security.

- Expert-led gap assessments that identify compliance risks.
- Quarterly reviews & real-time monitoring to keep you audit-ready.
- Clear, regulatory reporting so you always know where you stand.

 Stay ahead of compliance requirements and turn security into a competitive advantage.

Compliance Gap Assessment

Uncover and fix your compliance weak spots. Cyber regulations are evolving fast, and even small gaps can expose your organization to fines, breaches, or failed audits. TPx's Compliance Gap Assessment helps you uncover those gaps and build a clear, prioritized plan to fix them.

- Framework-Aligned Evaluation: We assess your environment against standards like HIPAA, PCI-DSS, and FTC Safeguards.
- Risk Categorization That Drives Action: From access controls and network segmentation to email and endpoint security, we identify and score areas most likely to cause breaches or compliance failures.
- Executive-Ready Reporting: You receive a visual maturity heatmap, C-level summary, and a comprehensive gap report with step-by-step remediation recommendations.

 Expose gaps and align with standards to meet audit demands, protect sensitive data, and build stakeholder trust.

Network Vulnerability & Penetration Scanning

Think Like a hacker. Protect like a pro. Cybercriminals don't wait for you to find security gaps—they're already looking. TPx helps you find them first.

- Vulnerability Scanning detects misconfigurations, unpatched software, and weak security settings.
- Penetration Testing simulates hacker tactics to reveal how an attacker could infiltrate your network.
- Detailed remediation plans—because knowing your weaknesses isn't enough—you need a strategy to fix them.

 Eliminate security gaps before attackers exploit them.

Dark Web Monitoring

Your data is out there – what happens next is up to you. Stolen credentials are being bought, sold, and traded on the Dark Web—are yours among them?

- 24/7 scanning for leaked passwords, sensitive files, and company data.
- Instant alerts so you can secure compromised accounts before hackers do.
- Guidance on preventing future leaks and strengthening password security.

 Stay ahead of cybercriminals and protect your business from fraud.

Network Security Assessments

See your network the way a hacker does. Most network breaches don't happen because hackers are brilliant—they happen because businesses don't know where their weak spots are.

- Full visibility into your network assets, architecture, and security controls.
- Policy validation for data retention, network monitoring, and compliance.
- Recommendations that matter—no generic reports, just actionable insights.

 Know your vulnerabilities, secure your network, and stay protected.

“TPx has provided me with great experts on every project I needed.”

-Nelson Estrada
Director of Information Technology, GoodFarms

Wireless Security Assessment

Fast Wi-Fi shouldn't mean easy access for hackers. Wireless networks are prime targets for cybercriminals. TPx ensures your Wi-Fi isn't an open door for hackers.

- Authentication & encryption audits to secure your wireless network.
- BYOD security reviews to protect mobile devices.
- Signal mapping to optimize coverage and eliminate security risks.

 Lock down your wireless security without sacrificing performance.

Microsoft 365 Security Assessment

Your Microsoft 365 environment is more exposed than you think. Misconfigured Microsoft 365 settings can turn your cloud environment into a security liability. TPx ensures your M365 security is ironclad.

- Multi-Factor Authentication (MFA) & Conditional Access audits.
- Security settings for Exchange, SharePoint, and Teams.
- Compliance alignment with DLP, AIP, and retention policies.

 Harden your cloud security and reduce M365 risks.

ASV Scan - Certified PCI-DSS Vulnerability Scanning

If you process payments, you need to be PCI-DSS compliant. Period. PCI-DSS compliance is mandatory for businesses handling credit card payments. Non-compliance can result in fines, lawsuits, and data breaches.

- Quarterly external vulnerability scans for PCI compliance.
- Certified reports to ensure audit readiness.
- Automated compliance verification—so you're always up to standard.

 Secure cardholder data and maintain PCI-DSS certification with confidence.

Customized Advisory Services

Cybersecurity isn't one-size-fits-all. Your strategy shouldn't be either. Security isn't just about tools—it's about having the right strategy. If you don't have an in-house security team, TPx brings one to you.

- Risk assessments, security architecture reviews, and compliance guidance.
- Custom consulting—one-time or ongoing.

 Get expert-driven security support without full-time staffing costs.

TPx isn't just another cybersecurity provider — we're your sidekick in cyber resilience.

Whether you need **penetration scanning, compliance audits, security assessments, or strategic cybersecurity guidance**, we provide the expertise, tools, and real-world strategies to keep your business protected.
